

[2]

Datum:

$$X \sim U(a, b) \quad a < b$$

$$a = 0.5$$

$$D[X] = 0.2$$

Hinweis:

$b$

$$E[X] =$$

Permeine:

$$X \sim U(a, b) \quad a < b$$

$$1. D[X] = \frac{(b-a)^2}{12} \Leftrightarrow$$

$$\Leftrightarrow (b-a)^2 = 12 D[X] \Leftrightarrow b-a = \pm \sqrt{12 D[X]}$$

$$a < b \Leftrightarrow b-a > 0$$

$$b-a = \sqrt{12 D[X]} = \sqrt{3 \cdot 4 D[X]} = 2 \sqrt{3 D[X]} \Rightarrow b = a + 2 \sqrt{3 D[X]}$$

$$E[X] = \frac{a+b}{2} = \frac{1}{2} \left[ a + a + 2 \sqrt{3 D[X]} \right] = \frac{1}{2} \left[ 2a + 2 \sqrt{3 D[X]} \right] =$$

$$= a + \sqrt{3 D[X]}$$

2.

$$a = 0.5 = \frac{5}{10} = \frac{1}{2}$$

$$D[X] = 0.2 = \frac{2}{10} = \frac{1}{5}$$

$$b = a + 2 \sqrt{3 D[X]} = \frac{1}{2} + 2 \sqrt{\frac{3}{5}} \approx 2.05$$

$$E[X] = a + \sqrt{3 D[X]} = \frac{1}{2} + \sqrt{\frac{3}{5}} \approx 1.27$$

Orbem:

$$\boxed{\begin{array}{l} b = a + 2 \sqrt{3 D[X]} \approx 2.05 \\ E[X] = a + \sqrt{3 D[X]} \approx 1.27 \end{array}}$$
